Trade Placement Blueprint

Entry Trade Alert:

- Wait for a CPA trade entry alert email / text

- Apply 10% of your short term trading account equivalent value in BTC to each trade.

- Remember the base currency for your short term trading account is Bitcoin (not dollars).

- Sample Trade Entry:
    - Buy 1.93 ETH up to 0.05174 BTC
      using a <u>Limit</u> order

- Calculating your position size:
    - Short term trading account equivalent value in Bitcoin x 10% / ETH buy up to price = Amount of ETH to buy for this order.

    - For the above example:
        - 1.00 BTC * 10% = 0.10 BTC / 0.05174 BTC = 1.93 ETH

Exit Trade Alert:

- Wait for a CPA trade exit alert email / text.

- Sample Trade Exit:
    - Sell 1.93 ETH using a <u>Limit</u> order at the market price at the time you enter the sell order. If not filled within a minute or two, raise the Limit price somewhat and re-enter the order until filled.
